

Tooling Kit Quick Add on MO Quotes

September 2025

Tooling Kit Quick Add

- A new feature has been added to HST that allows HFOs in the US and Europe to quickly add tooling kits to machine MO Quotes
- When creating a machine MO Quote, you will now see the below buttons appear on the Quote Details page
- Haas has preselected the most common toolholder kits and workholding kits for each machine, inch kits for the US and metric kits for Europe
- When you click one of these buttons, it will automatically add the preselected tooling kit to your quote
- This eliminates the need to go to the tooling price list to select tooling kits to add to your quote

Workholding Starter Kit

Tooling Kit Quick Add

- We have kept the preselected tooling kits simple by only making the most common toolholder and workholding kits available with the Quick Add buttons
- These preselected kits do not change to match different tapers available on mills so make sure the taper of the tooling kit matches the machine taper
- If you select a different taper for a machine, you can add the corresponding tool kit by going to the tooling price list from within the machine MO Quote
- To add different tooling kits or any other tooling items, click the “+ Tooling” button shown below on the Quote Details page to go to the tooling price list
- To remove one of the preselected tooling kits or any other tooling items from a MO Quote, click the “+ Tooling” button and remove those items
